Professional Summary

I'm a driven Full Stack Developer with 2+ years of experience creating and managing large-scale applications for businesses. I've worked on projects like ERP systems, university management platforms, and FinTech solutions using **Java**, **Spring Boot**, **Angular**, and **Tailwind CSS**. I focus on writing clean, secure, and efficient code, following Agile practices and development standards. I'm passionate about building intuitive user interfaces and reliable backend systems that deliver smooth, seamless experiences for users.

Technical Skills

- **Languages:** Java, Typescript, C, C++
- **Frameworks:** Spring Boot, Spring Cloud, Hibernate, JPA, Angular
- **Database Management:** MySQL, Oracle, MongoDB
- **Cloud Platforms & Containerization:** AWS (EC2, S3), Redis, Kubernetes
- **Tools:** Git, Maven, IntelliJ IDEA, Eclipse, Jira
- **Development Practices:** RESTful APIs, Microservices, JWT Authentication
- **Design Concepts:** Object-Oriented Programming (OOP), Data Structures, Angular Material, Tailwind CSS, Responsive UI Design

Additional Skills

Experienced with CI/CD pipelines, Agile methodologies, and foundational DevOps practices. Skilled in machine learning basics using Python, with strong communication and teamwork abilities.

Professional Experience

Assistant Programmer

Jan 2024 – Sep 2025

Southeast University

- Designed microservices with Spring Boot and Angular, ensuring scalability.
- Enhanced system security with JWT authentication and role-based access controls.
- Implemented logging and monitoring tools for real-time system insights.
- Improved app speed with Redis caching and optimized database queries.

Junior Programmer / Programming Assistant

Nov 2022 – Dec 2023

Southeast University

- Developed responsive apps using Java 8+, Angular 14+, and Tailwind CSS.
- Managed deployments on AWS, using auto-scaling and load balancing.
- Collaborated with cross-functional teams to deliver high-quality solutions under Agile methodologies.
- Assisted in integrating third-party APIs for added app functionality.

Projects

Developed and deployed 12+ web applications, including 5 ERP systems serving 30,000+ active users, all live and delivering operational value.

Student Management System (SMS)

- A platform for managing student data, attendance, academic performance, and communication between stakeholders.

Supply Chain Management (SCM)

- A solution for optimizing the flow of goods, services, and information from suppliers to employees efficiently.

Human Resource Management System (HRM)

- A system designed to streamline employee recruitment, management, and performance tracking processes.

Online Application Management System

- A tool to manage and process applications, office notes, and correspondence digitally.

Degree Verification

- A module for validating academic credentials and verifying the authenticity of degrees or certificates.

E-commerce Website (School Project)

- A platform developed for buying and selling products as part of an academic project.

Extracurricular Activities

- Competitive Programming: Active on platforms like **LeetCode**, **Codeforces**, **GeeksforGeeks**, and **HackerRank**.
- ICPC Participant: Represented Southeast University in multiple programming contests.

Education

Bachelor of Science in Computer Science & Engineering

Southeast University

CGPA of 3.79 out of 4.0.
